CYCLE INTERPRETATION

Attractive -1.0

WHAT IT SHOWS

Price relative to a long-term logarithmic trend and its historical deviation bands.

WHY IT MATTERS

It provides cycle valuation context across assets whose prices compound over long periods.

CURRENT READ

Bitcoin is -1 standard deviations from log trend and is classified as Cheap.

INVESTOR POSTURE

Accumulate gradually

Direct log-regression z-score, capped visually at -2 to +2.

Bitcoin market cycles

A historical framing of recurring phases—not a forecast that the next cycle must repeat.

Cycle 1	Cycle 2	Cycle 3	Cycle 4	Next cycle
2011-2013	2015-2017	2018-2021	2022-present	Unscored
— Accumulation — Markup — Distribution — Drawdown	— Rebuild — Markup — Euphoria — Reset	— Accumulation — Expansion — Distribution — De-risking	— Reset — ETF inflows — Maturation — Transition	— Observe — Confirm
Early adoption → first broad speculative peak	Re-accumulation → global retail expansion	Institutional interest → new all-time-high cycle	Current cycle; phase labels remain provisional	No timing or return embedded.

CYCLE CONTEXT · 02

Macro evidence

High-level liquidity and financial-condition indicators that shape Bitcoin's market backdrop.

U.S. M2	2026-07-01	10Y Real Yield	2026-08-25	Broad U.S. Dollar	2026-08-21	Financial Condition
---------	------------	----------------	------------	-------------------	------------	---------------------

\$23,218B

BITCOIN BACKDROP

-2 · Strongly supportive

WHY IT MATTERS

Faster money growth can improve nominal liquidity available to risk assets.

CURRENT READ

Over three months it rose by \$461.3B or 2.03%. That recent direction is supportive for Bitcoin because this indicator is generally more favorable when rising.

Federal Reserve Bank of St. Louis (FRED) · monthly

2.32%

BITCOIN BACKDROP

+1.93 · Strongly restrictive

WHY IT MATTERS

High real yields raise the opportunity cost of holding a non-yielding asset such as Bitcoin.

CURRENT READ

Over three months it rose by 0.16 percentage points or 7.41%. That recent direction is a Bitcoin headwind because this indicator is generally more favorable when falling.

Federal Reserve Bank of St. Louis (FRED) · daily

118.06 index

BITCOIN BACKDROP

+0.4 · Neutral / mixed

WHY IT MATTERS

A stronger dollar often tightens global financial conditions; a weaker dollar can ease them.

CURRENT READ

Over three months it fell by 1.31 index or 1.09%. That recent direction is supportive for Bitcoin because this indicator is generally more favorable when falling.

Federal Reserve Bank of St. Louis (FRED) · daily

-0.57 index

BITCOIN BACKDROP

WHY IT MATTERS

Lower or negative real effective exchange rate conditions.

CURRENT READ

Over three months it fell by 0.57 index or 1.09%. That recent direction is supportive for Bitcoin because this indicator is generally more favorable when falling.

Federal Reserve Bank of St. Louis (FRED) · monthly

Macro evidence describes the environment around Bitcoin. It should confirm—or challenge—the cycle reading, not replace valuation and risk discipline.

Current metric notes

THE FIGURES USED IN THE SELECTED ASSET'S CYCLE READING, WITH CONTEXT ATTACHED.

BTC Price

\$79,927

WHAT IT IS

The latest closing market price for Bitcoin.

WHY IT MATTERS

It anchors every valuation band, moving average, and risk comparison shown below.

CURRENT READ

As of 2026-08-27, sourced from CoinMetrics community BTC CSV + Coinbase Exchange recent candles + Coinbase spot ticker. Price alone does not show whether the asset is cheap or expensive.

Trend Fair Value

\$134,878

WHAT IT IS

The price implied by the dashboard's long-term logarithmic regression trend.

WHY IT MATTERS

It provides a cycle-scale reference that adjusts for compounding rather than treating every dollar move equally.

CURRENT READ

Bitcoin is 40.74% below the model trend, which indicates a discount to the long-cycle reference. This is a model estimate, not a guaranteed destination.

Log Z-Score

-1

WHAT IT IS

The logarithmic price gap from trend, measured in historical standard deviations.

WHY IT MATTERS

It makes unusually cheap and unusually stretched conditions comparable across long market cycles.

CURRENT READ

Bitcoin is 1 standard deviations below trend. Negative readings are cheaper; positive readings are more stretched.

MVRV

1.41

WHAT IT IS

Bitcoin market value divided by realized value—an estimate of the network's aggregate on-chain cost basis.

WHY IT MATTERS

Lower values imply less unrealized profit in the network; higher values imply more embedded profit and potential selling pressure.

CURRENT READ

The latest available reading is 1.41 as of 2026-05-23; market value was about 41% above realized value, or 1.41 times estimated aggregate cost basis. That indicates aggregate unrealized profit, but not a cycle top by itself.

Current Zone

Cheap

WHAT IT IS

A plain-language classification of the current log-regression valuation band.

WHY IT MATTERS

It converts the statistical reading into a quick cycle-level description.

CURRENT READ

Bitcoin is below trend but not at the deepest accumulation band.

Regime

Constructive

WHAT IT IS

A combined score using valuation, the 200-day trend, RSI, drawdown, and MVRV when available.

WHY IT MATTERS

It cross-checks valuation against momentum and market structure so one indicator does not dominate the conclusion.

CURRENT READ

Constructive with score 3. Positive checks currently outweigh negative ones. See Price Score Checks for the components.

Macro, fiscal & market supply

2026-08-19

7.35k

3.26k

3 months: fell 1.6%

near the middle of its historical range · percentile 56.7

rising is generally supportive

Federal Reserve / U.S. Treasury via FRED · weekly · Federal Reserve assets minus Treasury cash minus overnight reverse repos; this is a proxy, not an official measure.

CYCLE INTERPRETATION

Neutral / mixed

-0.3

WHAT IT SHOWS

The Fed balance sheet less Treasury cash and reverse repos.

WHY IT MATTERS

It approximates dollars available to support financial-market liquidity.

CURRENT READ

\$5,791.77B. Percentile 56.7 means 56.7% of readings since 2015 were at or below this level and 43.3% were higher—near the middle of its historical range. Over three months it fell by \$94.43B or 1.6%. That recent direction is a Bitcoin headwind because this indicator is generally more favorable when rising.

INVESTOR POSTURE

Maintain discipline; wait for confirmation

BROAD U.S. DOLLAR

Score maps the level's percentile since 2015 onto -2 to +2, oriented so negative is more supportive for Bitcoin. It is context, not a forecast.

3 months: fell 1.09%

near the middle of its historical range · percentile 60

falling is generally supportive

Federal Reserve Bank of St. Louis (FRED) · daily

CYCLE INTERPRETATION

Neutral / mixed

+0.4

WHAT IT SHOWS

The trade-weighted value of the U.S. dollar.

WHY IT MATTERS

A stronger dollar often tightens global financial conditions; a weaker dollar can ease them.

CURRENT READ

118.06 index. Percentile 60 means 60% of readings since 2015 were at or below this level and 40% were higher—near the middle of its historical range. Over three months it fell by 1.31 index or 1.09%. That recent direction is supportive for Bitcoin because this indicator is generally more favorable when falling.

INVESTOR POSTURE

Maintain discipline; wait for confirmation

Score maps the level's percentile since 2015 onto -2 to +2, oriented so negative is more supportive for Bitcoin. It is context, not a forecast.

10Y REAL YIELD

2026-08-25

2.32%

3 months: rose 7.41%

near the top of its historical range · percentile 98.2

falling is generally supportive

Federal Reserve Bank of St. Louis (FRED) · daily

CYCLE INTERPRETATION

Strongly restrictive

+1.9

WHAT IT SHOWS

The inflation-adjusted yield on a 10-year Treasury.

WHY IT MATTERS

High real yields raise the opportunity cost of holding a non-yielding asset such as Bitcoin.

CURRENT READ

2.32%. Percentile 98.2 means 98.2% of readings since 2015 were at or below this level and 1.8% were higher—near the top of its historical range. Over three months it rose by 0.16 percentage points or 7.41%. That recent direction is a Bitcoin headwind because this indicator is generally more favorable when falling.

INVESTOR POSTURE

Prioritize risk control

Score maps the level's percentile since 2015 onto -2 to +2, oriented so negative is more supportive for Bitcoin. It is context, not a forecast.
